

HDPE CHALLENGE

All Tech Industries (ATI) is excited to introduce a program that offers a superior coating solution at a 42% reduction in cost (**\$4.35 per SF**). This offer is due to the negotiated reduction in our raw material costs and in an effort to gain greater exposure of our Ultra COAT™ **Black** advanced spray-applied coating. Ask an All Tech Industries representative to learn more.

Our products offer many advantages over what you are likely using today (*i.e. HDPE or equivalent*). There simply is no stronger, longer-lasting coating solution available in the marketplace.

This is a superior solution that is backed by a 20 Year Limited Warranty, therefore, unlike HDPE and other equivalent products, you won't spend precious time and money on fines, maintenance, repairs or replacements every 4-5 years.

Call and schedule a meeting with one of our representatives, so that you can fully understand the significance of this offer and the various applications our coatings.

HDPE Challenge Program Details:

- No LIMIT to the Number of Projects or SF (surface area to be coated)
- \$4.35 per SF includes the following:
 - ✓ Ultra COAT™ **Black** (also available in a Desert Tan color)
 - ✓ GeoTextile
 - ✓ Complete Documentation
 - Statement of Work, Project Reports, Consumption Reports, Photos, Videos and a 20 Year Warranty Certificate
- Transportation (Delivery) and Installation Services are quoted based on the project.
- Plan on a minimum of 30 business days from date of order and deposit until project completion.
- **Coating Project Costs Are Based On The Following:**
 - Specific dimensions (SF) of the total surface area to be coated
 - Ultra COAT™ **Black** and selected GeoTextile (**\$4.35 per SF**)
 - Thickness of the applied Ultra COAT™ **Black**
 - Our standard thickness is 60 mils; however the specific needs of your project may require a greater thickness
 - Geotextile Preferences - There are five (5) Geotextiles available
 - ATI Transportation and Professional Services (does not include site prep work)

HDPE

HDPE Challenge Overview:

- Wrinkles and Waves are not an issue for Ultra COAT™ **Black**, unlike the HDPE where these folds can cause stress cracks or allow for liquid to flow above or below an HDPE geomembrane. Ultra COAT™ **Black** molds precisely to the contour of the topography.
- Stress cracking is a problem with HDPE. ATI's Ultra COAT™ **Black** can handle the stresses of oilfield operations while maintaining a ZERO factor for stress cracks!
- Ultra COAT™ **Black** is a spray-applied coating with enhanced tensile and elongation properties. It is delivered by ATI's patented specialized equipment capable of producing dynamic pressures in excess of 6000 PSI and 300° (F).
- The Ultra COAT™ **Black** delivers a seamless, durable, environmentally safe solution for any primary & secondary containment (liner needs). Complies with Local, State and Federal Regulations
- We stand behind our products with a 20 Year Limited Warranty
- Tensile Strength 3X's that of HDPE
- 100% Seamless (no seams and won't crack, flake or peel)
- Elongation = 10x's the elongations of HDPE (60 mil)
- Ultra COAT™ **Black** has excellent adhesion and a low perm rating. This helps prevent degradation from harsh chemicals or water. HDPE does NOT have these features.
- 100% UV Resistant, 100% Solids, VOC's Free
- Oxidation impacts the physical properties of HDPE, but NOT with Ultra COAT™ **Black**
- Non-Skid coating is available as an option
