

All Tech Industries introduces its latest Coating Solution, Ultra COAT Composite 3.0™

Grapevine, TX – February 17, 2009 – All Tech Industries (ATI), the premier provider of innovative spray-applied solutions announced today its latest Coating solution, Ultra COAT Composite 3.0.™

The Ultra COAT Composite 3.0™ is a state-of-the-art, high performance, spray-applied carbon fiber injected coating solution that is delivered by ATI's patented specialized equipment. The coating comes in standard colors of battleship gray, desert tan and black. The rapid set feature supports vertical applications and can be applied in any thickness in a single application. It provides a monolithic membrane that offers flexibility, resiliency and exceptional strength (over 13,000 psi), which makes it the most durable spray-applied coating on the market.

“We continue to enhance our product offering to provide better solutions to the marketplace,” said ATI Chief Operating Officer, Brad Pelton. “ATI understands the importance of providing the latest innovative solutions to allow companies to add new as well as protect their existing infrastructure. The Ultra COAT Composite 3.0™ delivers a wide range of applications from spray-applied liners; to encapsulating material for dry hazardous materials; to new construction projects; and rehabilitation projects,” added Brad.

About All Tech Industries

Since 1993, All Tech Industries (ATI) has built a solid reputation for delivering innovative spray-applied solutions leveraging advanced technologies to both local firms and multi-billion dollar corporations throughout the United States and Canada. Our patented formula and application process delivers a product that surpasses any other solution in the marketplace today. For more information, visit www.alltechindustries.com.
